

SilverBullet Tic Tac Toe Administration manual

In this manual you will get direction on how to install and deploy SilverBullet's Tic Tac Toe game.

To deploy on your local machine:

- Clone the repository from Github:
 - `git clone https://github.com/HUGB-SilverBullet/TicTacToe.git`
- Navigate to folder:
 - `cd TicTacToe`
- Create package:
 - `./bin/package`
- Run Spark server
 - `./gradlew run`
- Access with browser at
 - `http://localhost:4567/`
- Maintain
 - You can make changes to the code and then run `./bin/build_and_test` to see if the application will build and if all tests have passed.

If setting up on external server:

1. Create a Heroku app.
2. Run script `bin/deploy` (deploys to Heroku app directly)
3. Alternative to previous step - Create Travis CI, configure `.travis.yml` file , push to Github and Travis will deploy to Heroku (in our case <http://herokutoe.herokuapp.com/>)
